

# Intelligent Solution

## neopost

- **The Company:**

A worldwide leader for mailing system solutions

- **The Project:**

A brand new product line made up of communicating mailing machines

- **The Results:**

Full technical and commercial success since the product line launch in USA mid-2008

- **The Goal:**

Obtain a real **hardware and software cost cut** while keeping the **technological lead** in terms of **communication and security**

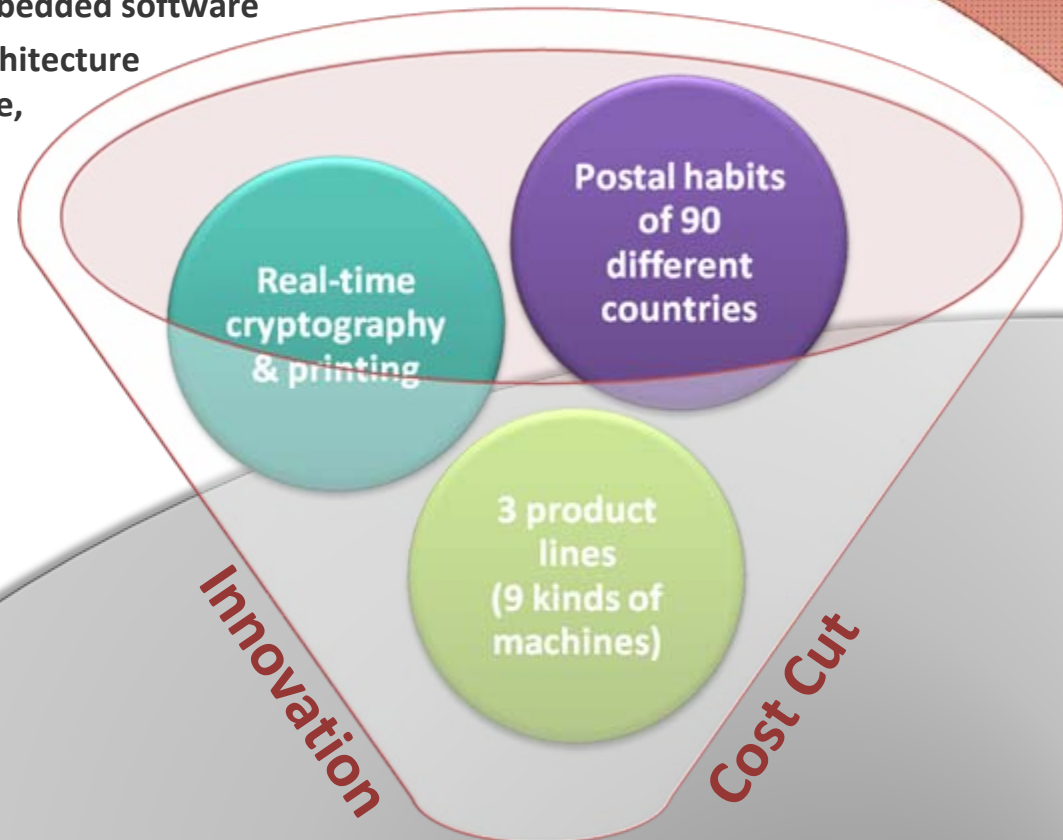

Windows Embedded CE

# ● The Project Challenges

- **Hardware:** Select the right platform with the right balance between cost and efficiency, efficiency that allows the execution of a highly sophisticated and open real-time embedded software
- **Software:** Design a new brand new software architecture that allows real cost cut in terms of maintenance, multiplatform's and multi-client's management
- **System:** Integrate the last technologies (USB, GPRS, Wifi, HTML, XML) in real-time and embedded environment

# ● The Keys of Success

- Active participation in the hardware design
- Hardware interfaces development
- New software architecture design, setting-up and follow-up
- Real-time components and business components development

neopost

THEORIS

IS

**1 customizable & configurable software,  
a software usable for other products  
and other platforms**
